

SESAHUB

The universal WEB platform

A STATEMENT

Visual management allows you to know whether the situation is normal or abnormal for an activity zone.

The aim is to be able to view the relevant indicators for a department or workshop quickly in order to manage the different activities effectively.

Updating these visual management tables requires a large amount of data that needs to be constantly updated and takes a lot of time and energy.

How do you structure visual management with rapid, fluid and reactive indicators?

THE SOLUTION

SESA SYSTEMS' innovation in 2020 is based on the creation of the SESA HUB platform, which allows you to aggregate all real-time exchanges with production operators. Collecting production chain data on SESA HUB allows you to view production monitoring and other indicators in real time. This DIGITAL VISUAL MANAGEMENT at production sites is done using digital screens linked to an internal or external network.

SESAHUB structures and organises an instant and permanent communication and exchange network, with production meetings using a chain of interactive screens: E-STATION, E-LEANBOARD, E-MEETING and E-ACTIVBOARD.

This digital visual management gives you rapid access to company data for shared, efficient and quick decision-making.

Simplicity

Intuitive and clear software
No installation

Productivity

Eliminate unnecessary tasks
and increase performance

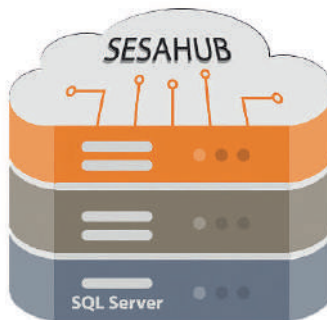

Speed

React more quickly and
optimize your action plans

Traceability

Gain visibility on your action plans

Assistance

Full service for installation and
user training

Security

Installation on your
existing servers
