

INDUSTRIAL PERFORMANCE INDICATOR

A statement

An **indicator is an objective piece** of information describing a situation from a strictly quantitative viewpoint observing a result. But the indicator is only of real significance within the predefined framework if it «indicates» **where action is needed**. Performance indicators are a core part of **VISUAL MANAGEMENT**, a form of management using visual and verbal communication to facilitate everyday improvement and permanently convey offer the different messages and indicators needed to carry out the various tasks assigned to staff. For example, **overall equipment effectiveness (OEE) is an indicator of machine performance**.

The goal

The aim is to make the challenges of visual management as easy as possible, define user-friendly communication spaces and create attractive materials within the framework of a high level of autonomy. Of course, sight-based management helps to avoid interpretations and misunderstandings.

The advantages of our products

- Careful presentation by theme
- A wide selection of customisable accessories
- Magnetic or adhesive support
- Design-led, aesthetic and modular
- Quick and easy to use

Benefits

Indicators are essential tools for a quick reading of information. They therefore allow:

- An understanding by all
- An effective and visual presentation
- To react in case of drift but also to act by anticipation
- Facilitate the implementation of visual communication in an industrial environment
- To present the company's performance indicators as well as the procedures
- Engage all stakeholders for better overall performance
