- Lean Office

Electrically adjustable ergonomic desk | LEANERGO ELECTRIC is the first desk to take into account the user's specific physical requirements in order to provide a workstation with the purpose of well-being.

- The originality of this ergonomic desk lies in its system of quick adjustment to suit the height of the current user.
- A single button located under the desktop controls an electric motor that raises and lowers the work position, whether you are seated, standing, or switching between both.
- A Bluetooth link on the computer lets you programme the height adjustment according to your needs and thus improve working conditions.
- The electrical drive system raises the desk from seated to standing position in 10 seconds.
- The height is adjustable between 630 and 1280 millimetres for work that requires both standing and sitting. These changes not only enable better concentration but, by offering improved comfort, help prevent musculoskeletal disorders (MSD).
- The structure of the tray is in white laminate.

CODE	DESIGNATION	LEAD TIME	PACKING
119424	W 1200 x D 800 x H 630 - 1280 mm	15 days	Premounted
