

# FOCUS ON INNOVATION

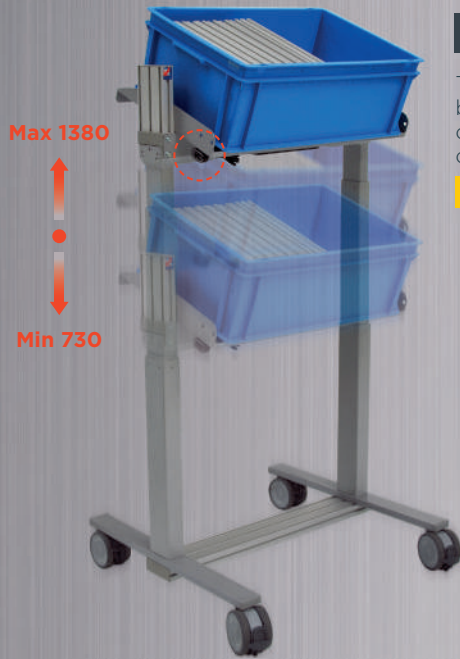

## 300 NEW PRODUCTS CREATED FOR YOU

### Ergonomics

Ergonomics and scientific study of working conditions, particularly human-machine interfaces.

Ergonomic workstations help to improve both productivity for the company and comfort and safety for employees.

**SESA SYSTEMS' R&D team factors ergonomics into the development of its products.** The products are particularly suited to production workstations to realise gains across the line: in wellbeing and productivity.

#### LEANPOST 300 ERGO

This mobile electric trolley unit with bin function helps to streamline component flows by reducing strain on the back.

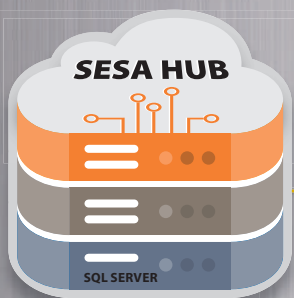

See p.148

#### QUALIPOST 620 ERGO

This height-adjustable workshop electric workstation makes it possible to adjust the height of the worktop and adopt the best working position to reduce musculoskeletal disorders (MSD). Optimise the workstation with use of ergonomic seats and stools.

See p.75

Web application

#### E-MEETING

Track your production data in real time, organise meetings where your users interact simultaneously!

### Industrie 4.0

Internet of things

Industry 4.0 refers to a new generation of connected, automated and intelligent factories.

With the digital revolution, the barriers between the physical and digital world are becoming blurred, bringing to life an interconnected 4.0 factory where employees, machines and products interact.

**Today SESA SYSTEMS invents the management visual DIGITAL with a new line of products innovative and interactive to integrate the factory of the future.**
